

4. React Events

Functional Component

Greet.js

```
import React from "react"; function
```

```
Greet()
```

```
{
```

```
  return <h1>Hello</h1>
```

```
}
```

export default Greet App.js

```
import React, { Component } from 'react';
```

```
import Greet from './components/Greet';
```

```
class App extends Component {
```

```
  render(){ return (
```

```
    <div className="App">
```

```
      <Greet />
```

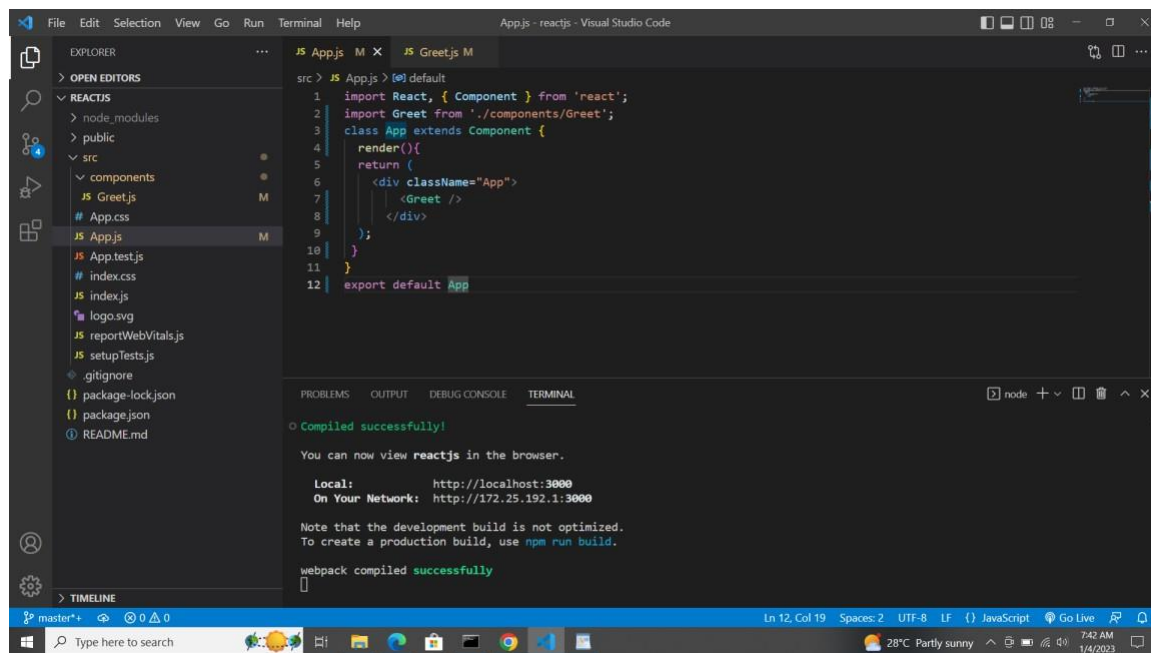

```
    </div>
```

```
  );
```

```
}
```

```
}
```

```
export default App
```

Output:- Hello

Class Component

Welcome.js

```
import React, { Component } from "react"; class
```

```
Welcome extends Component {
```

```
  render(){    return <h1>Welcome
```

```
to react</h1>
```

```
  }
```

```
}
```

```
export default Welcome
```

App.js

import React, { Component } from 'react'; import

Greet from './components/Greet'; import

Welcome from './components/welcome'; class

App extends Component { render(){ return (

```
<div className="App">
```

```
<Greet />
```

```
<Welcome />
```

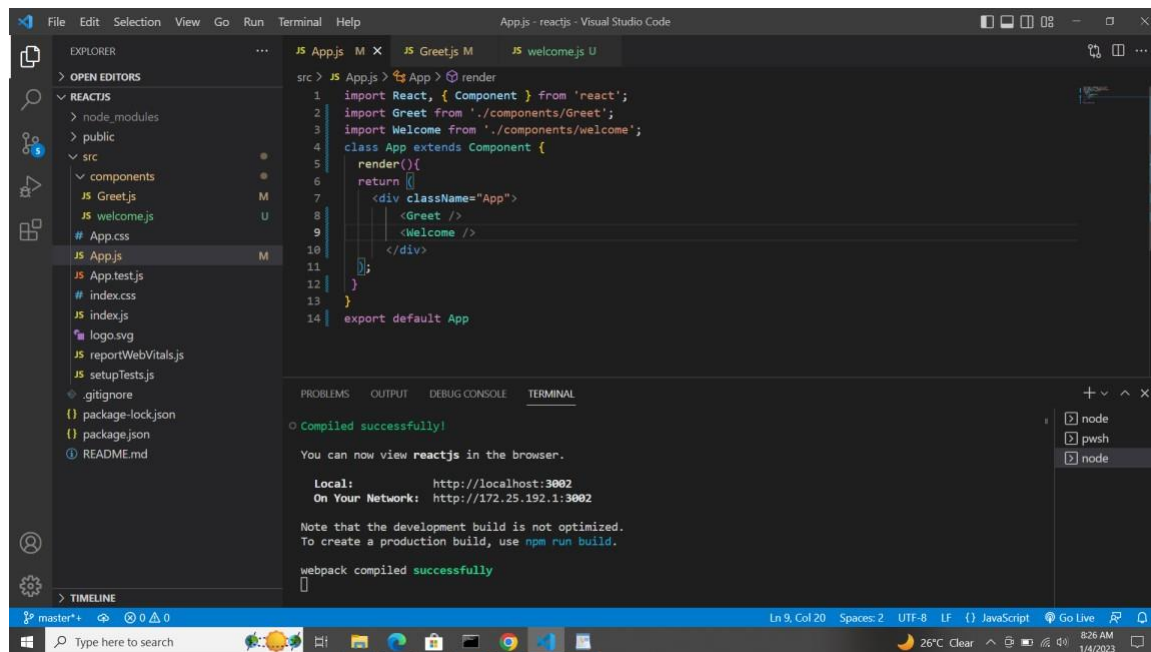

```
</div>
```

```
);
```

```
}
```

```
}
```

export default App

Output:- Welcome

to react

Event.js import React

from "react"; function

Event()

{

function disp()

{

return alert("wellcome to gpt raichur");

}

return(

<button onClick={disp}>submit</button>

);

}

export default Event

App.js

import React, { Component } from 'react'; import

Greet from './components/Greet'; import

Welcome from './components/welcome'; import

Event from './components/Event'; class App

extends Component { render(){ return (

<div className="App">

<Greet />

<Welcome />

<Event />

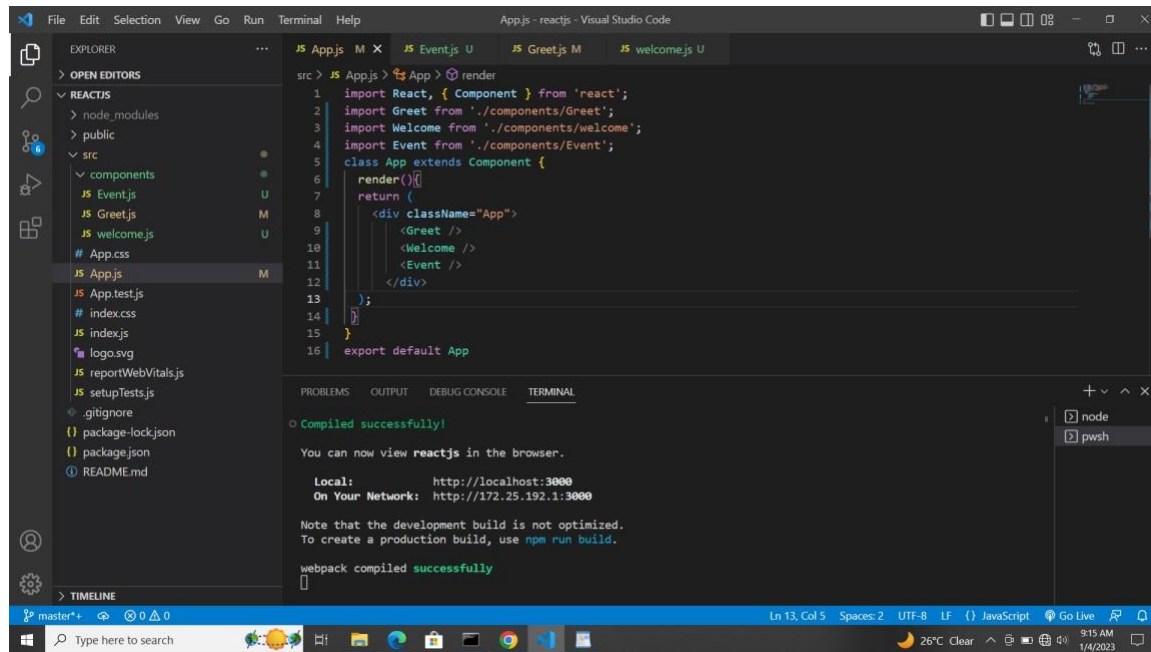

</div>

);

}

}

export default App

Output:-
